

JEB INVISIWALL™
Structural Glass Wall Systems

JEB INVISIWALL™ Structural Glass Walls offer stunning visual clarity for panoramic views while incorporating protection and structural stability. Full-height or cantilevered fins help brace the system and transfer loads to the structure by supporting the vertical glass.

Systems can also be designed to bolt back to a steel substructure.

Each system is designed to your specific dimensions and load requirements, incorporating a broad selection of standard and custom point-supported spider fittings, splice plates, spring plates and fin brackets to connect the system components together.

STANDARD VERTICAL WALLS

	Series 101	Series 102	Series 103
Full-Height Glass Fin	 <p>IVW-101FF</p>	 <p>IVW-102FF</p>	 <p>IVW-103FF</p>
Partial Glass Fin	 <p>IVW-101PF</p>	 <p>IVW-102PF</p>	 <p>IVW-103PF</p>
